

LASSO & QuickBooks® Online

Leverage our flexible, bi-directional integration for unique or complex rules.

LASSO's integration with Quickbooks Online is powered by Zapier to give you the flexibility to meet your business needs. From generating invoices to handling more complex use cases like updating your CRM noting a pending invoice—LASSO's integration can be built to fit your wildest use cases.

How it Works

1. Get **API key** from LASSO.
2. **Create a Zapier account** (we recommend Zapier's Professional Version)
3. **Create a new Zap** in Zapier.
4. Add LASSO **invoice trigger** step (through LASSO credentials).
5. **Add Quickbooks action** to find the customer on the LASSO invoice (through Quickbooks credentials).
6. Add Quickbooks action to **create an invoice** in QuickBooks.
7. Invoice payments in Quickbooks are **recorded and pushed back to LASSO**.

Common Use Cases

Add or Update
Customers

Add or
Update Venues

Trigger Invoice from
LASSO to QuickBooks

Additional Actions:

In addition to this integration's invoice trigger, you can create or search for the following items in LASSO:

CREATE
